System Requirements

The **HeartStor Church Management System (ChMS)** is designed to run on standard Windows-based computers and is suitable for both standalone and networked environments. The system supports **32-bit and 64-bit architectures** and can be deployed for single-user or multi-user access across a local network.

Supported Operating Systems

HeartStor ChMS can be installed on the following Microsoft Windows operating systems:

- Windows 10 (32-bit and 64-bit)
- Windows 11 (64-bit)

The system may also run on earlier supported versions of Windows, but current versions are recommended for security and performance.

Hardware Requirements

Minimum Requirements

- Processor: Intel or compatible processor
- Memory (RAM): 4 GB
- Hard Disk Space: Minimum of 2 GB free space (additional space required for data growth and backups)
- Display Resolution: 1024 × 768 or higher
- Network: Optional (required for multi-user access or shared data storage)

Recommended Requirements

- Processor: Multi-core processor
- Memory (RAM): 8 GB or more
- Hard Disk Space: Solid State Drive (SSD) recommended
- Display Resolution: 1920 × 1080 (Full HD)
- Network: Gigabit Ethernet for multi-user environments and for shared data storage access and backups

Software Requirements

- Microsoft Windows with latest updates installed
- Administrative rights for installation
- PDF reader for viewing and printing reports
- Email access (SMTP) for system email features

Network and Multi-User Support

HeartStor ChMS is **network ready** and supports multiple users accessing the same church database simultaneously.

Network Requirements

- Local Area Network (LAN)
- Shared data folder accessible to all users (shared folders must be mapped to a drive letter)
- Stable network connection
- Appropriate file permissions for read/write access

Network Notes

- One workstation typically hosts the shared church database folder.
- All users must have consistent access paths to the data location.
- Regular backups are strongly recommended in network environments.

Database and Storage

- Each church database is stored in its own data folder.
- Supports multiple church databases on the same system.
- Built-in backup and restore functionality is included.

Optional Devices

- Printer for printing reports and forms
- Scanner (optional) for document capture
- Backup device or cloud storage for offsite backups (recommended)
